RESIDENTIAL INTERIORS

Tailored Living Spaces

We craft bespoke residential interiors that blend aesthetics with functionality. From luxury apartments and villas to compact urban homes, our designs reflect the personality and lifestyle of each client — balancing comfort, elegance, and smart space utilization.

End-to-End Home Design

UniCarper manages every phase of residential projects — concept, design, engineering, fabrication, and installation. Our in-house capabilities ensure seamless execution, consistent quality, and timely delivery across all residential typologies including villaments and turnkey homes.

With nearly half a decade of experience since 2021, UniCarper has transformed hundreds of residential spaces across Bengaluru — delivering premium interiors that stand the test of time through precision craftsmanship and innovative design solutions.

INDUSTRIAL DESIGN

Industrial Space Planning

UniCarper delivers end-to-end industrial design solutions encompassing factory layouts, warehouse interiors, and manufacturing facility fit-outs. Our engineering-driven approach optimizes workflow, space utilization, and operational efficiency across large-scale industrial environments.

Functional Aesthetics & Safety

We integrate robust structural design with purposeful aesthetics, ensuring every industrial space meets safety standards, regulatory compliance, and productivity goals. From steel fabrication to modular partitioning, our solutions are built to perform under demanding conditions.

UniCarper's industrial design expertise spans manufacturing plants, logistics hubs, and processing facilities — combining precision engineering with intelligent space design to create environments that drive operational excellence and long-term value.

IN-HOUSE FABRICATION

MS & SS Fabrication

UniCarper's in-house metal fabrication unit handles mild steel (MS) and stainless steel (SS) components with precision engineering. From structural frameworks and staircases to decorative metalwork and custom fixtures, our skilled fabricators deliver superior quality with tight tolerances, ensuring every piece integrates seamlessly with the overall design and build.

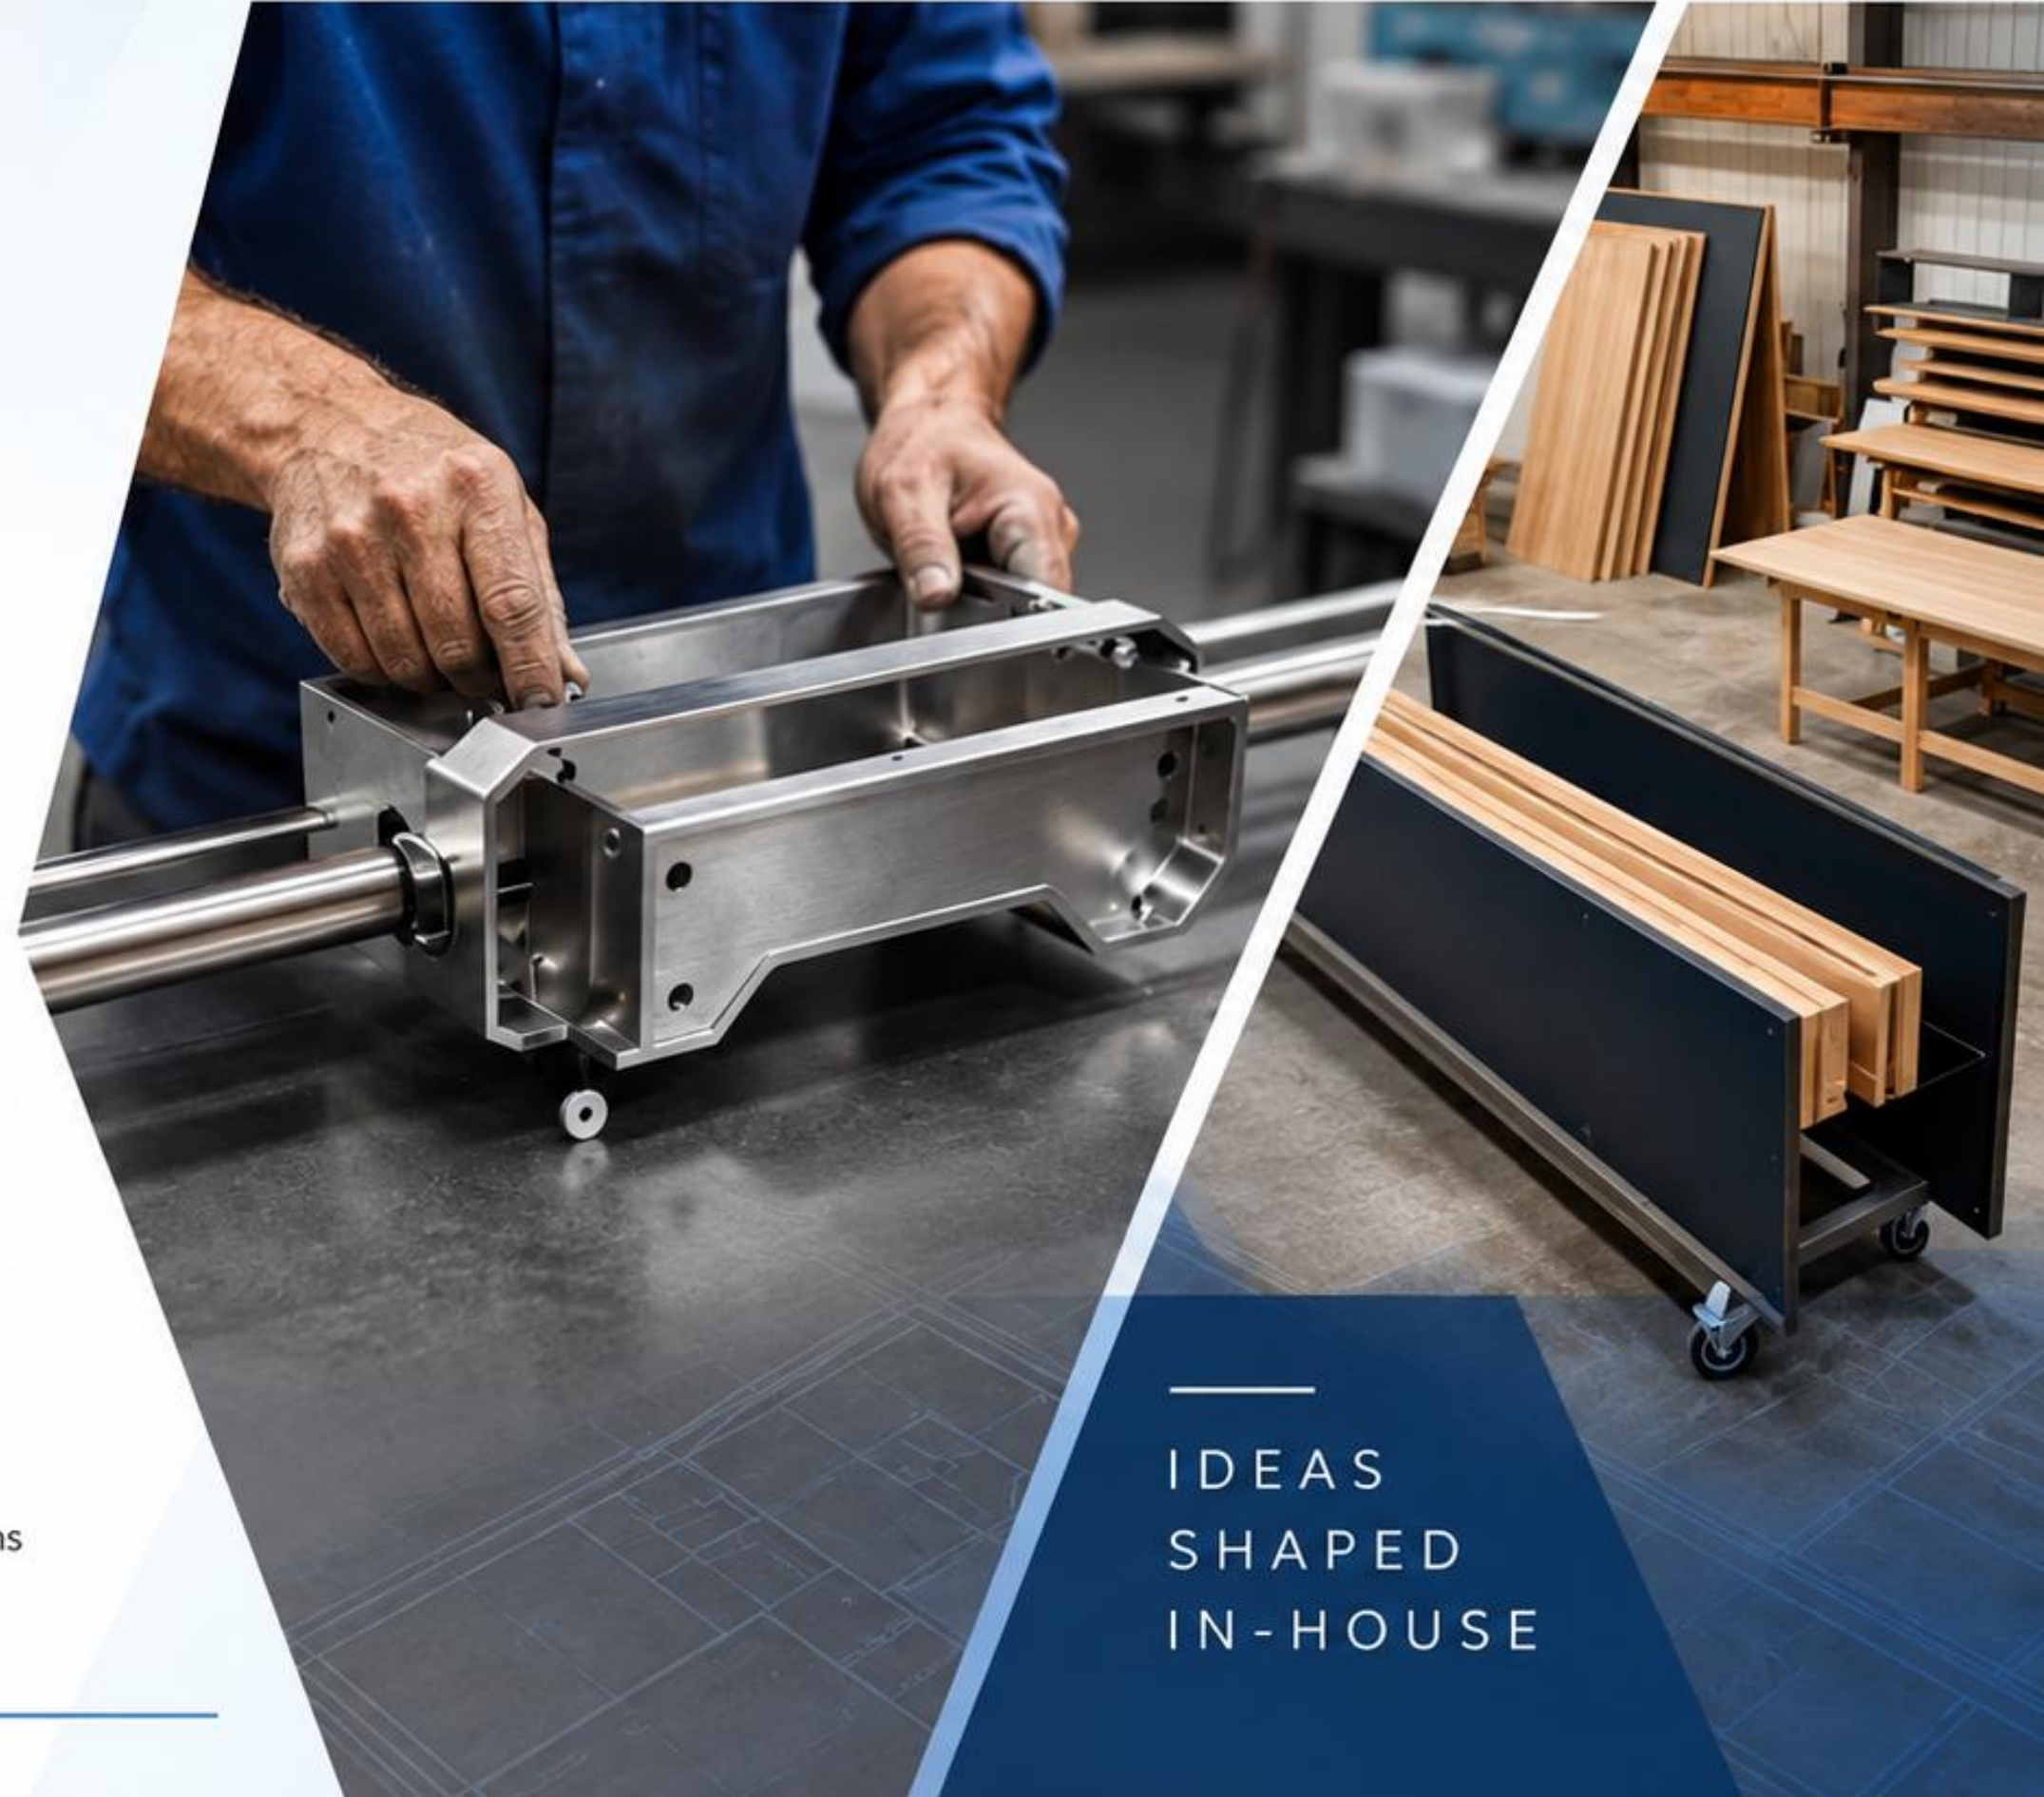

Wood & Custom Elements

Our carpentry and woodworking division crafts bespoke furniture, cabinetry, wall paneling, and decorative elements tailored to each project. Using premium timber, engineered wood, and composite materials, we create custom pieces that blend aesthetics with durability — from modular kitchen units and wardrobes to feature walls and handcrafted joinery.

Precision Craftsmanship

Every fabricated element at UniCarper undergoes rigorous quality checks before installation. Our integrated fabrication model eliminates third-party dependencies, ensuring faster turnaround, cost efficiency, and uncompromised quality control. Custom solutions are engineered to exact specifications, supporting both residential luxury projects and large-scale commercial and industrial builds.

ENGINEERING EXCELLENCE

Structural Integrity

UniCarper integrates civil, mechanical, and MEP engineering disciplines under one roof. Our in-house team ensures seamless coordination between design intent and structural execution, eliminating gaps between concept and construction with meticulous attention to detail.

Precision Engineering

Every project undergoes rigorous structural and load analysis before execution. UniCarper's engineering team applies advanced computational methods to ensure every installation meets international safety benchmarks, delivering precision-built environments that stand the test of time.

Technical Compliance

All materials and fabricated components comply with IS, BS, and international standards. UniCarper's engineering protocols include quality audits at every stage — from raw material inspection through final installation — ensuring zero-compromise outcomes on every project.

With over half decade of experiential exposure across residential, commercial, and industrial projects, UniCarper has developed proprietary workflows that reduce project timelines by up to 30% while maintaining the highest standards of structural integrity, safety, and finish quality across all disciplines.

SMART-POOL SOLUTIONS

Intelligent Pool Design & Automation

UniCarper delivers fully automated smart-pool systems with IoT-enabled controls, energy-efficient filtration, LED mood lighting, and remote monitoring. Each pool is engineered for seamless integration with the surrounding landscape and architecture, offering a luxurious and low-maintenance aquatic experience.

Custom Composite & Structural Pools

Our in-house fabrication capability allows us to construct composite and reinforced structural pools tailored to any site condition. From infinity-edge rooftop pools to villa lap pools, we deliver turnkey solutions — design, engineering, waterproofing, tiling, and commissioning — all under one roof.

ARCHITECTURAL MODULAR PODS

Prefabricated Modular Structures

UniCarper's architectural modular pods are precision-engineered, factory-built units designed for rapid on-site assembly. Constructed with composite materials and steel frameworks, each pod meets structural, thermal, and acoustic performance standards for residential and commercial applications.

Flexible & Scalable Deployments

Fully customizable in layout, finish, and function, our modular pods serve as offices, studios, hospitality suites, and residential extensions. Scalable configurations allow seamless expansion, enabling clients to grow their space efficiently without compromising on design quality.

VERSATILE
BUILT FOR MORE

UniCarper modular pods combine innovative engineering with premium interior finishes — delivering turnkey spatial solutions that are fast to deploy, durable in performance, and refined in aesthetic for every project scale.

COMPOSITE WATER INFRASTRUCTURE

Advanced Composite Systems

UniCarper engineers and fabricates composite water infrastructure using high-grade materials including MS, SS, and FRP composites. Our systems are designed for durability, corrosion resistance, and long-term performance across residential, commercial, and industrial applications.

End-to-End Water Solutions

From underground sump tanks and overhead reservoirs to water treatment units and distribution networks, UniCarper delivers fully integrated water infrastructure solutions — designed in-house, fabricated at our 15,000 sq ft facility, and installed with precision by our engineering teams.

UniCarper's composite water infrastructure solutions combine engineering excellence with premium fabrication — ensuring safe, efficient, and sustainable water management for every project scale.

WHY UNICARPER

30+ Years of Proven Excellence

Since 2021, UniCarper has delivered exceptional interior design and engineering projects across residential, commercial, and industrial sectors. Our decades of experience translate into deep domain expertise, reliable execution, and a legacy of satisfied clients across Bengaluru and beyond.

End-to-End In-House Capability

With a 8,000 sq. ft. in-house fabrication facility in Chellikere, we control every stage — from design and engineering to MS, SS, wood, and custom element production. No outsourcing, no delays. Full quality control under one roof ensures precision and consistency on every project.

Innovation-Driven Delivery

UniCarper integrates smart technology, modular construction, and advanced materials to deliver future-ready spaces. From smart-pool solutions and architectural modular pods to composite water infrastructure and turnkey villaments, we go beyond conventional interiors to redefine living and working environments.
